

JUnit Testing Exercises

Exercise 1: Setting Up JUnit

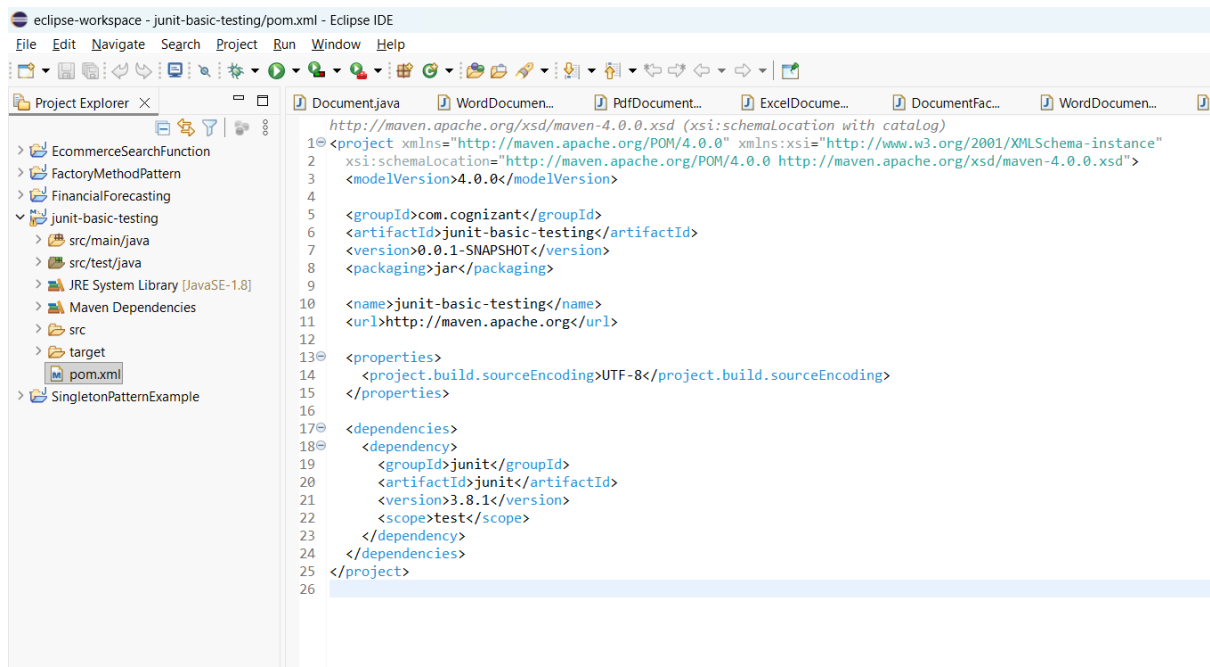

Step 1: Open the Project

Created a new Maven project named junit-basic-testing in Eclipse IDE.

Step 2: Open pom.xml

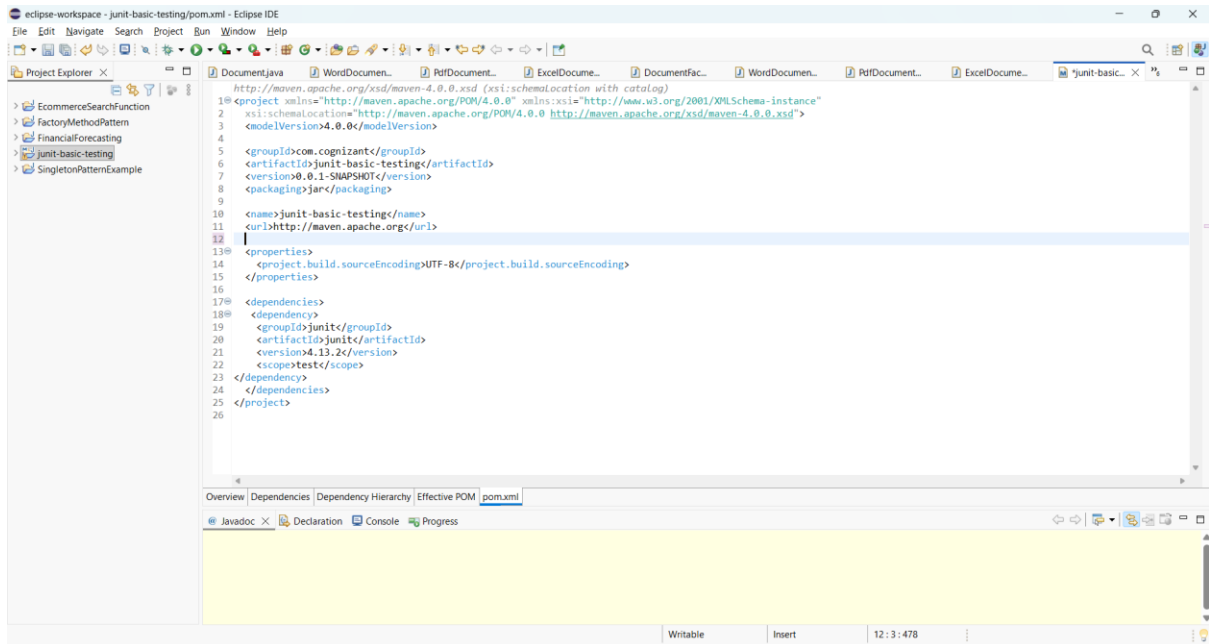

Opened the pom.xml file to configure project dependencies.

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

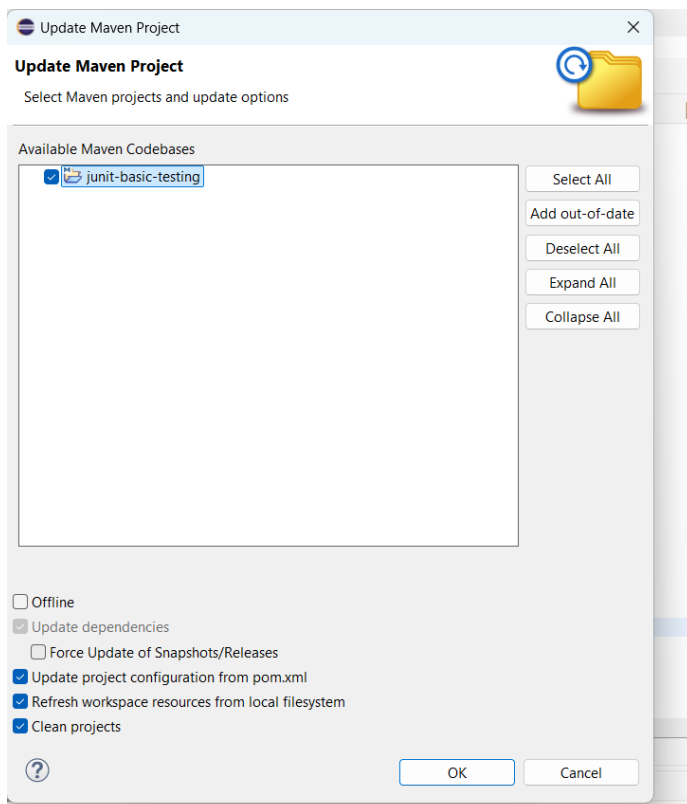

Step 3: Check the JUnit Dependency

Added the JUnit 4.13.2 dependency inside the <dependencies> section.

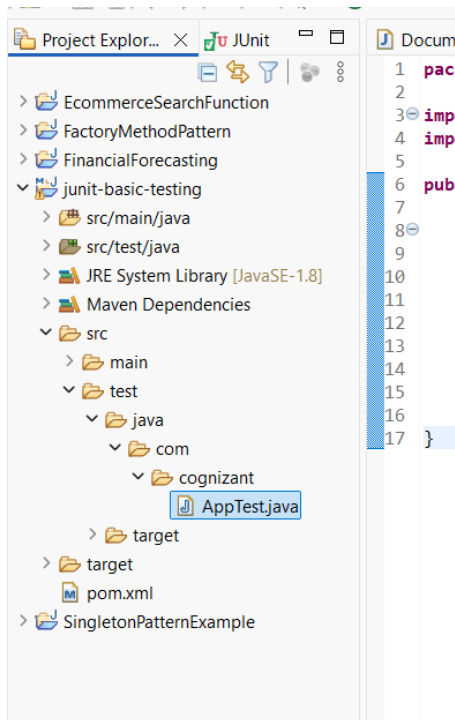

Step 4: Update Maven

Updated the Maven project to download the JUnit dependency.

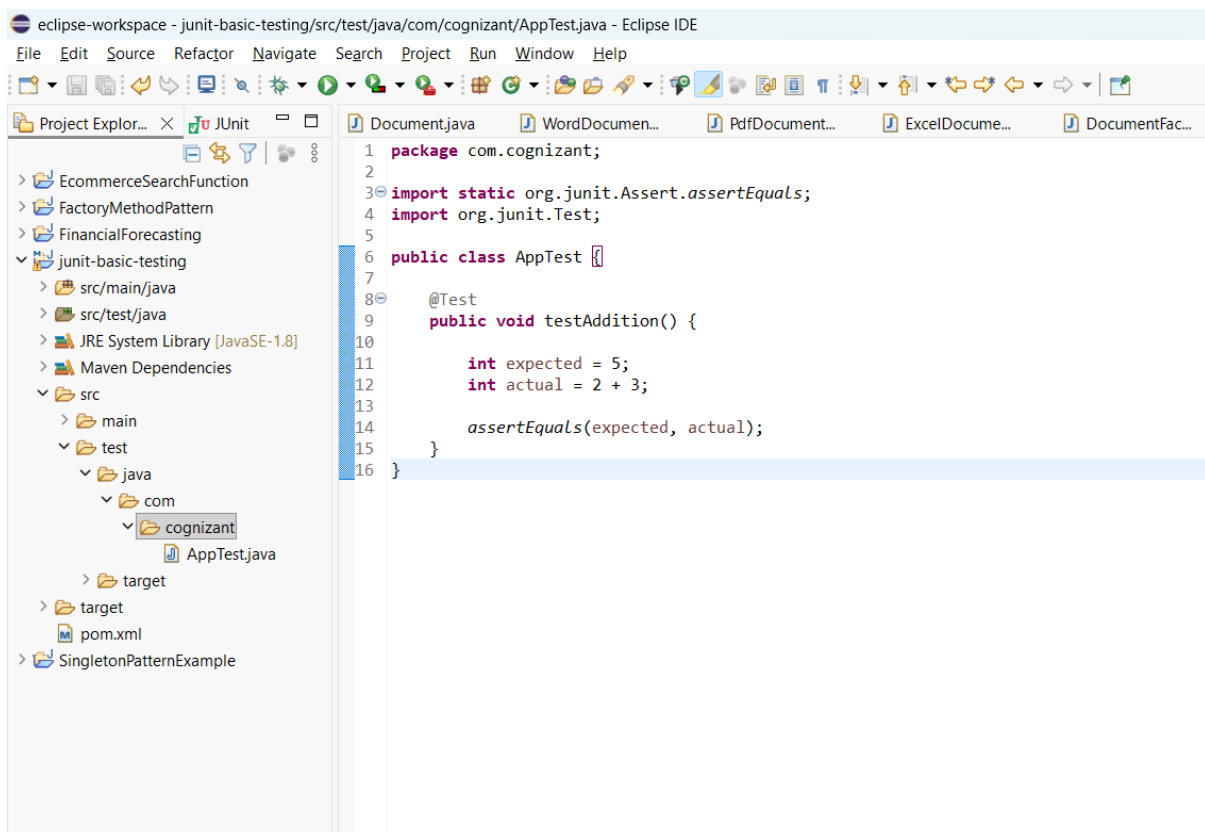

Step 5: Create Test Class

Created the AppTest.java class inside src/test/java.

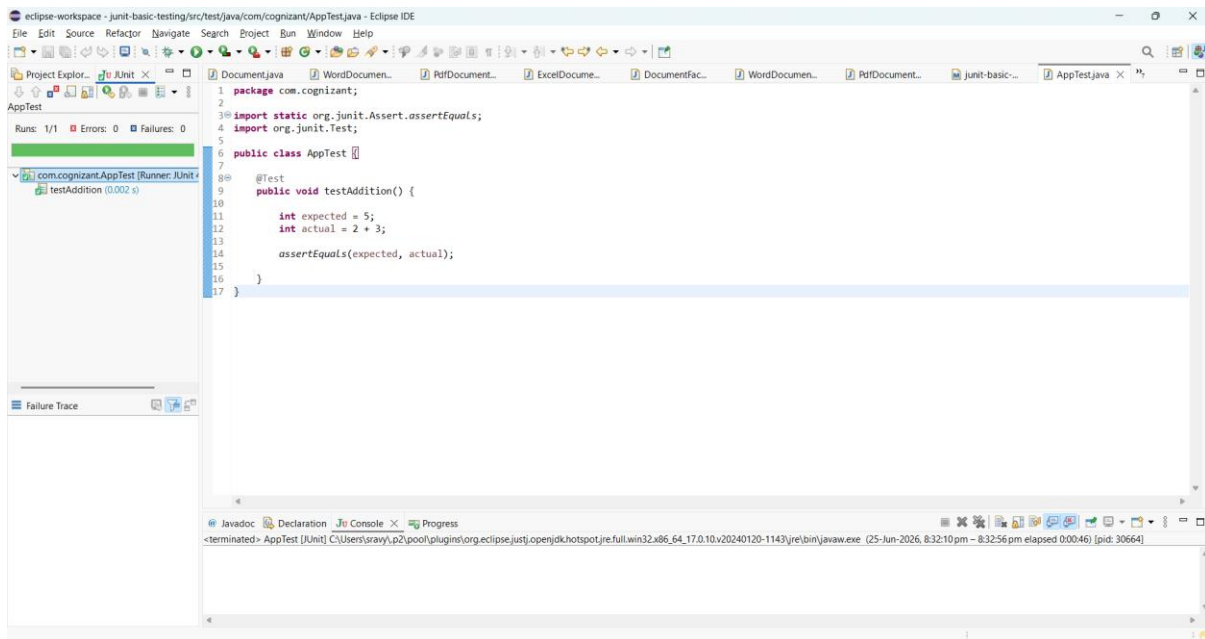

Step 6 – Write JUnit Test

Implemented a simple test method using the @Test annotation and assertEquals().

Step 7 – Run the JUnit Test

Executed the JUnit test successfully. The test passed with no failures.

Result:

The JUnit framework was successfully configured in the Maven project. A test class was created, and the JUnit test executed successfully.
