

React

11. ReactJS-HOL

Step 1: Creating the Event Examples React Application

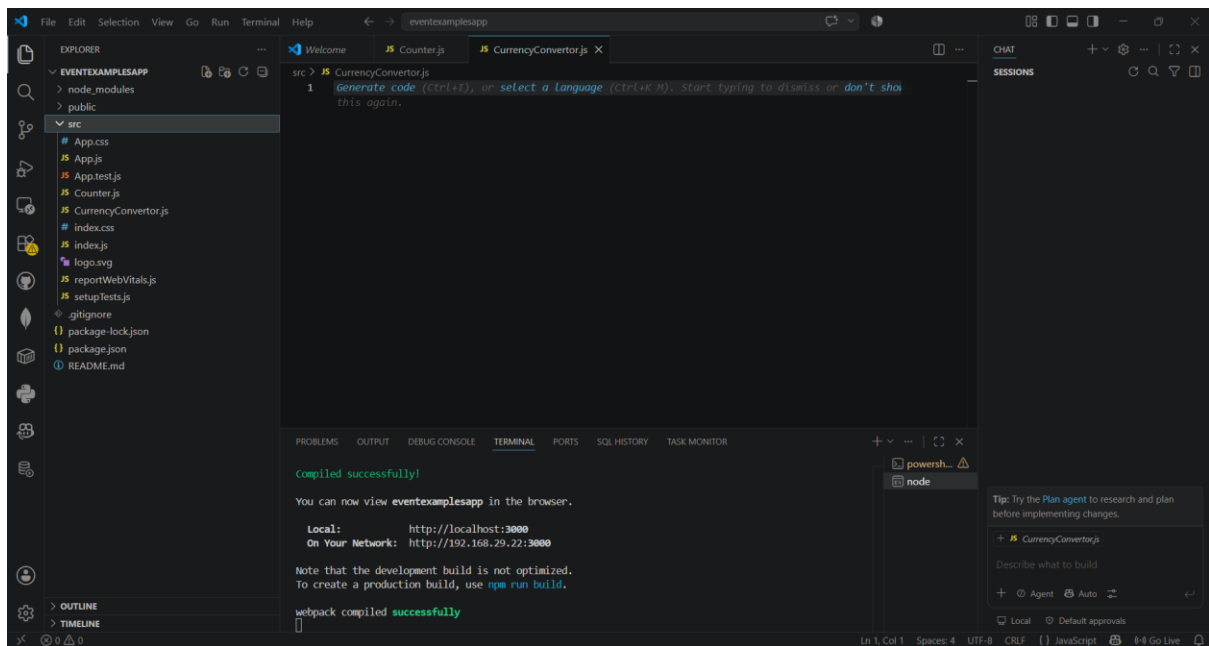

Step 2: Opening the Event Examples Project in Visual Studio Code

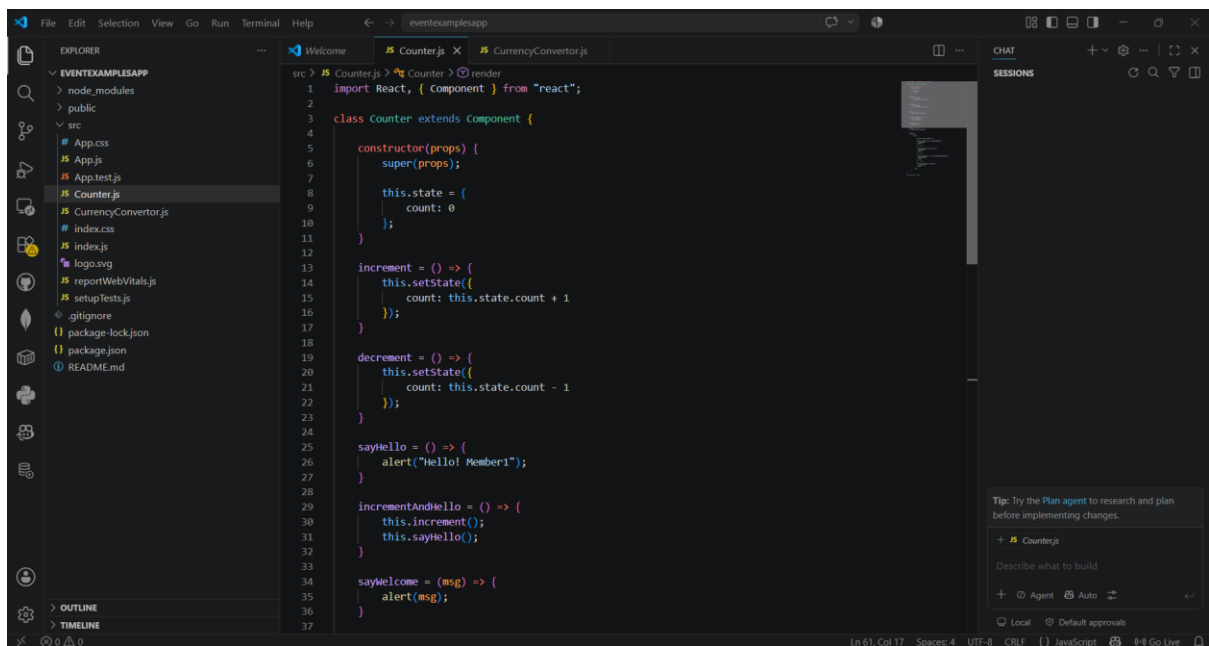

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

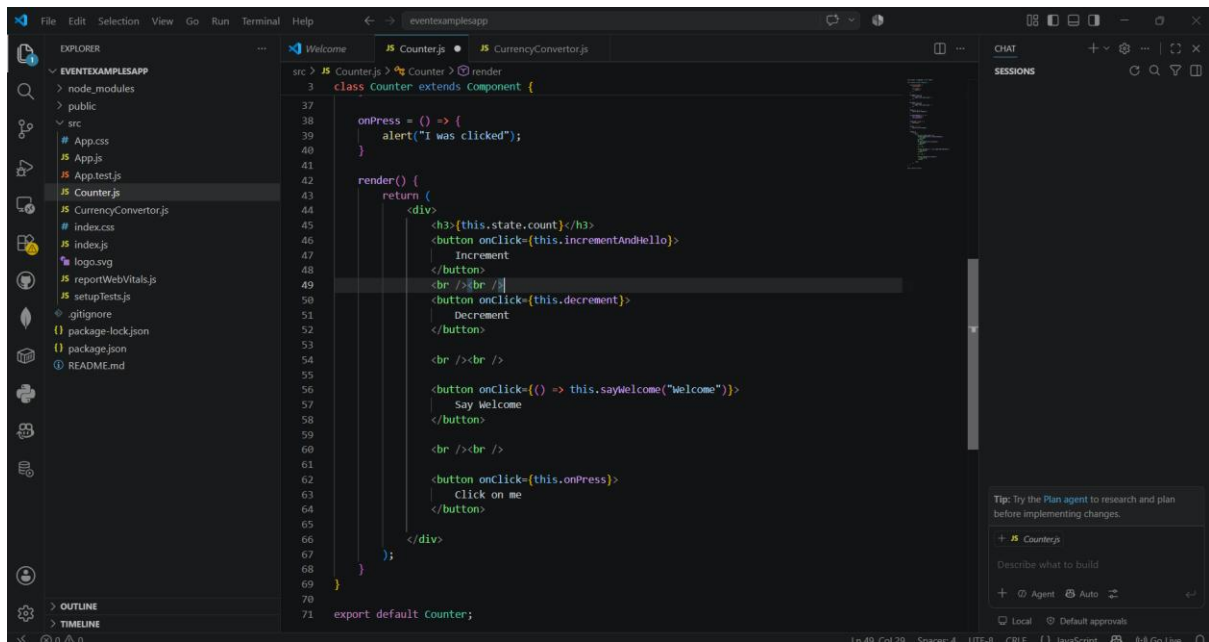

Step 3: Creating the React Components for Event Handling

Step 4: Implementing the Counter Component with React Event Handlers

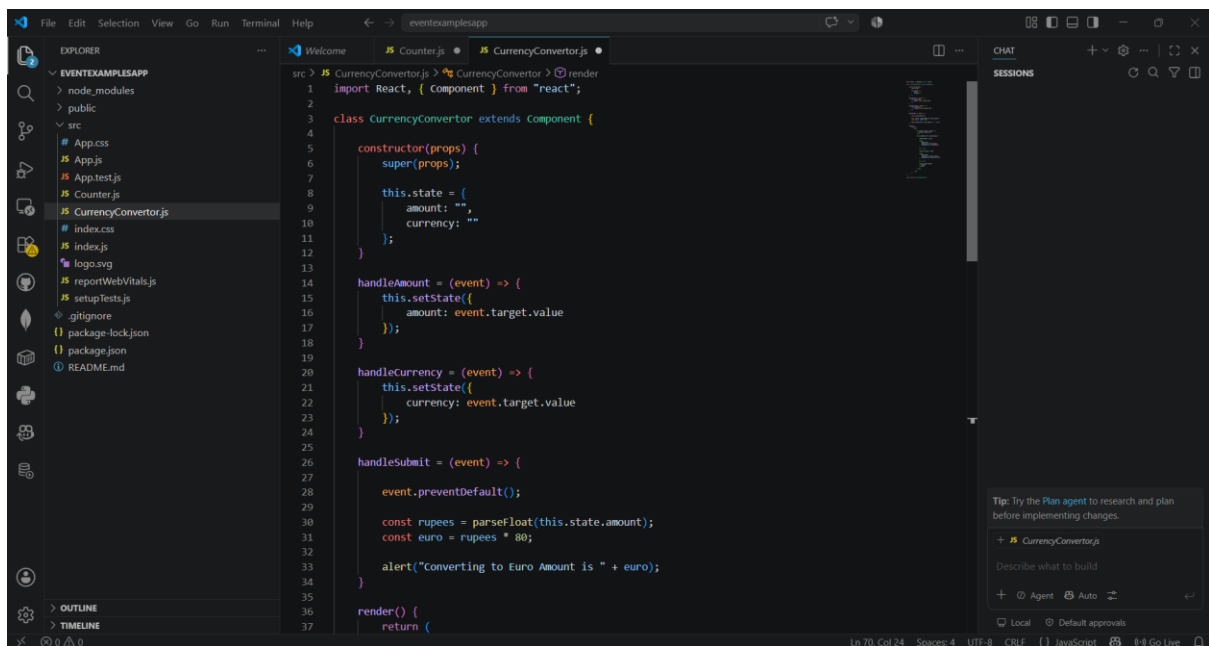

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

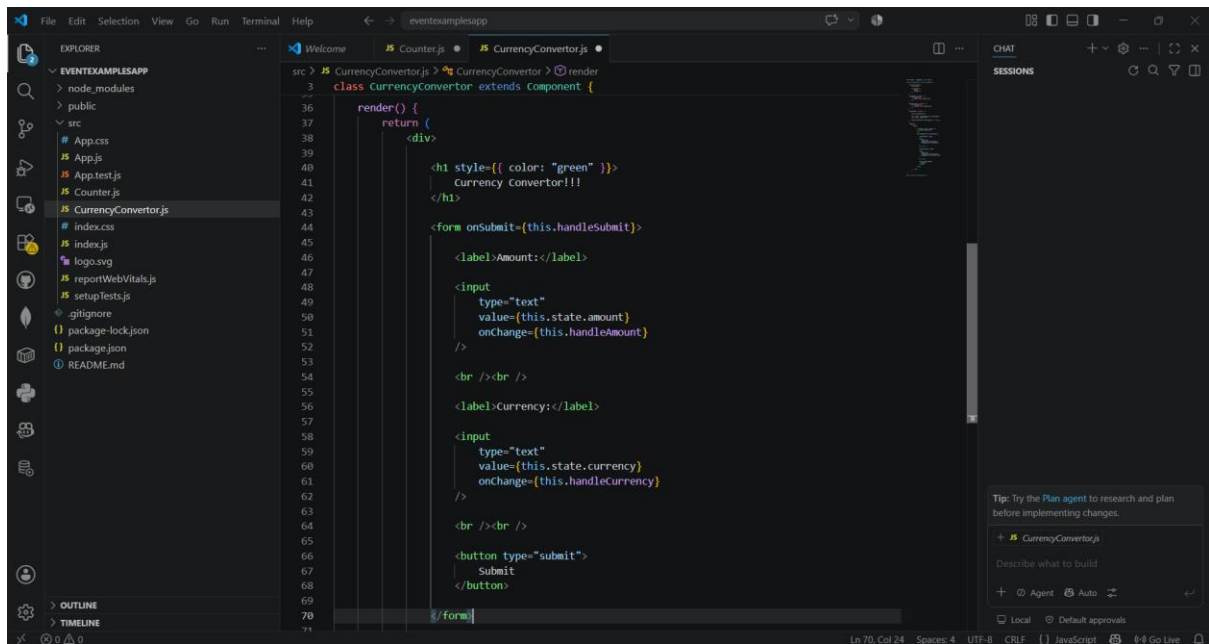

```
src > JS Counter.js > Counter > render
class Counter extends Component {
  37
  38   onPress = () => {
  39     alert("I was clicked");
  40   }
  41
  42   render() {
  43     return (
  44       <div>
  45         <h3>{this.state.count}</h3>
  46         <button onClick={this.incrementAndHello}>
  47           Increment
  48         </button>
  49         <br />
  50         <button onClick={this.decrement}>
  51           Decrement
  52         </button>
  53         <br />
  54         <button onClick={() => this.sayWelcome("Welcome")}>
  55           Say Welcome
  56         </button>
  57         <br />
  58         <button onClick={this.onPress}>
  59           Click on me
  60         </button>
  61       </div>
  62     );
  63   }
  64 }
  65
  66 export default Counter;
```

Step 5: Creating the CurrencyConvertor Component

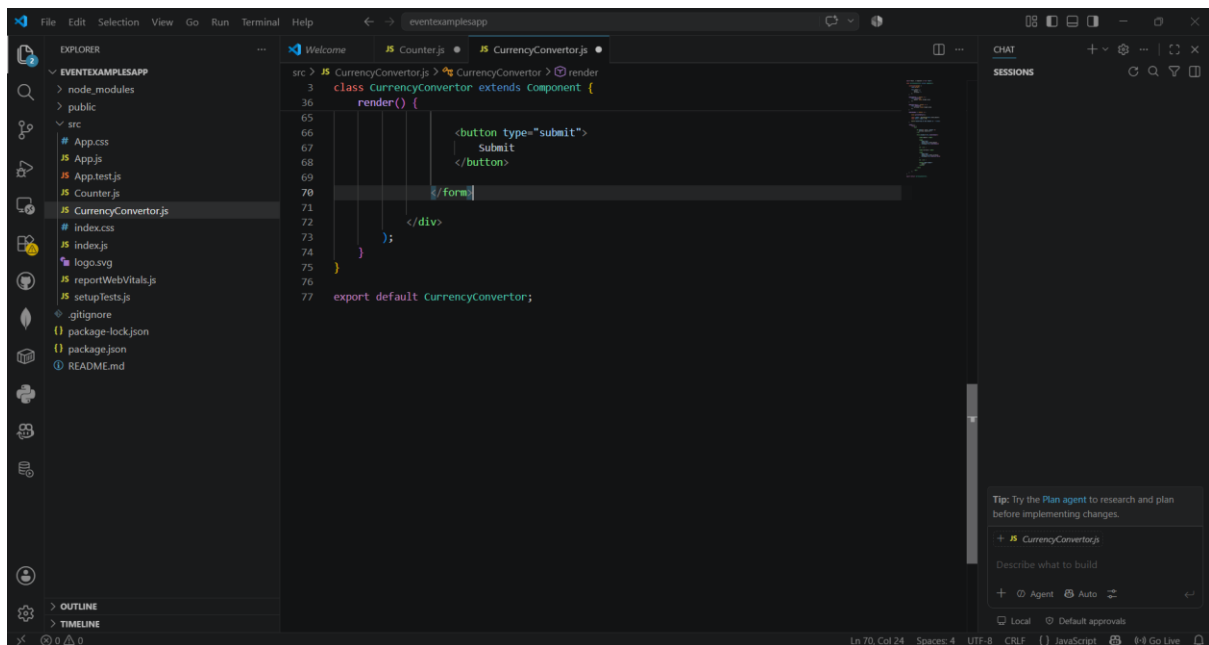

```
src > JS CurrencyConvertor.js > CurrencyConvertor > render
1 import React, { Component } from "react";
2
3 class CurrencyConvertor extends Component {
4
5   constructor(props) {
6     super(props);
7
8     this.state = {
9       amount: "",
10      currency: ""
11    };
12
13    handleAmount = (event) => {
14      this.setState({
15        amount: event.target.value
16      });
17    }
18
19    handlecurrency = (event) => {
20      this.setState({
21        currency: event.target.value
22      });
23    }
24
25    handleSubmit = (event) => {
26      event.preventDefault();
27
28      const rupees = parseFloat(this.state.amount);
29      const euro = rupees * 80;
30      alert("Converting to Euro Amount is " + euro);
31    }
32
33    render() {
34      return (
35
```

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

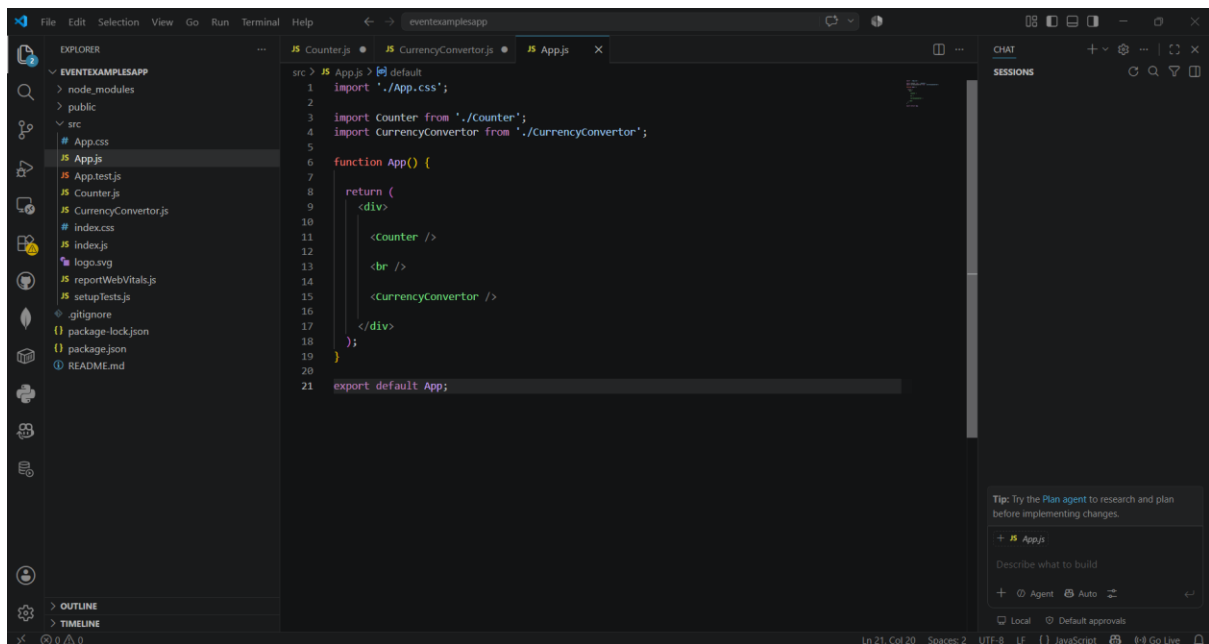

```
src > JS CurrencyConverter.js > CurrencyConverter > render
class CurrencyConverter extends Component {
  36
  render() {
  37    return (
  38      <div>
  39        <h1 style={{ color: "green" }}>
  40          Currency Converter!!!
  41        </h1>
  42
  43        <form onSubmit={this.handleSubmit}>
  44
  45          <label>Amount:</label>
  46
  47          <input
  48            type="text"
  49            value={this.state.amount}
  50            onChange={this.handleAmount}
  51          />
  52
  53          <br /><br />
  54
  55          <label>Currency:</label>
  56
  57          <input
  58            type="text"
  59            value={this.state.currency}
  60            onChange={this.handleCurrency}
  61          />
  62
  63          <br /><br />
  64
  65          <button type="submit">
  66            Submit
  67          </button>
  68
  69        </form>
  70      </div>
  71    );
  72  }
  73
  74  export default CurrencyConverter;
```

```
src > JS CurrencyConverter.js > CurrencyConverter > render
class CurrencyConverter extends Component {
  36
  render() {
  37    return (
  38      <div>
  39        <h1 style={{ color: "green" }}>
  40          Currency Converter!!!
  41        </h1>
  42
  43        <form onSubmit={this.handleSubmit}>
  44
  45          <label>Amount:</label>
  46
  47          <input
  48            type="text"
  49            value={this.state.amount}
  50            onChange={this.handleAmount}
  51          />
  52
  53          <br /><br />
  54
  55          <label>Currency:</label>
  56
  57          <input
  58            type="text"
  59            value={this.state.currency}
  60            onChange={this.handleCurrency}
  61          />
  62
  63          <br /><br />
  64
  65          <button type="submit">
  66            Submit
  67          </button>
  68
  69        </form>
  70      </div>
  71    );
  72  }
  73
  74  export default CurrencyConverter;
```

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

Step 6: Integrating the Counter and CurrencyConverter Components in App.js

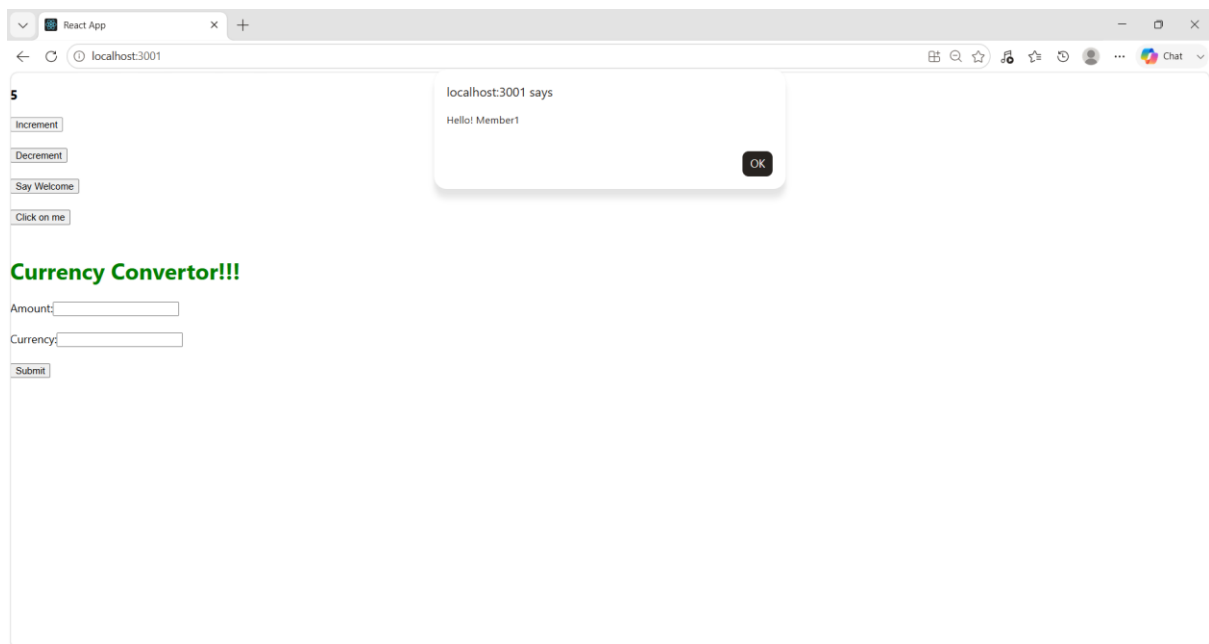

The screenshot shows the Visual Studio Code editor with the file explorer on the left displaying the project structure. The main editor window shows the `App.js` file with the following code:

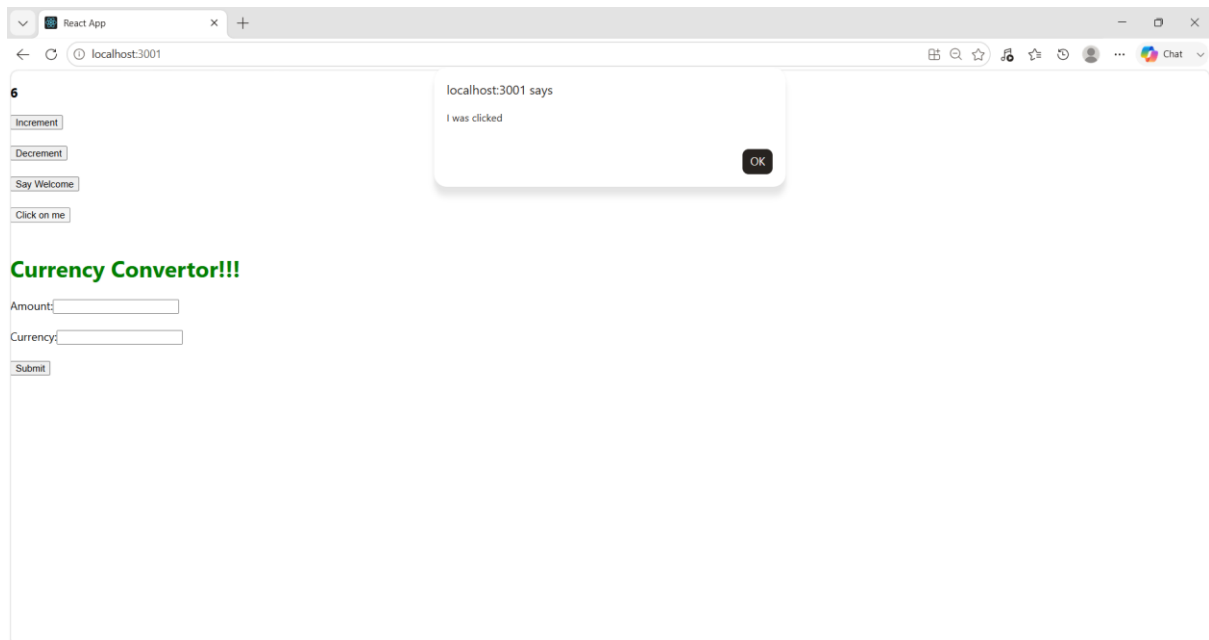

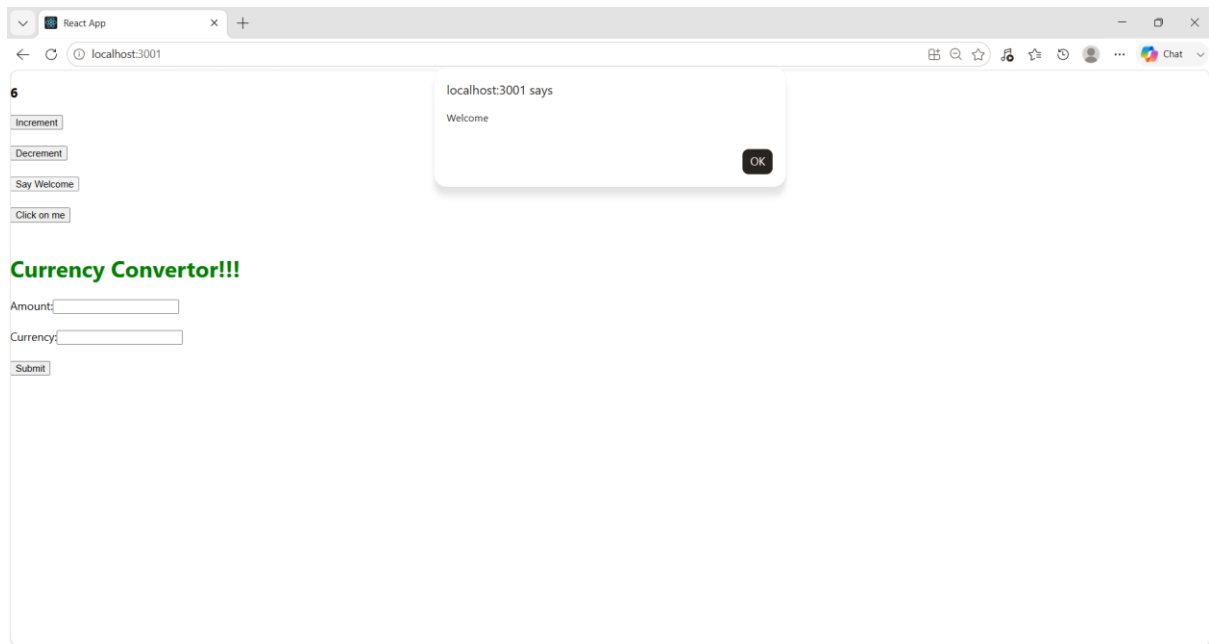

```
1 import './App.css';
2
3 import Counter from './Counter';
4 import CurrencyConverter from './CurrencyConverter';
5
6 function App() {
7
8   return (
9     <div>
10       <Counter />
11       <br />
12       <CurrencyConverter />
13     </div>
14   );
15 }
16
17 export default App;
```

The right sidebar shows the CHAT panel with a tip: "Tip: Try the Plan agent to research and plan before implementing changes." Below the tip is a section for "App.js" with a description: "Describe what to build".

Step 7: Displaying the Final Event Handling React Application
