

React

12. ReactJS-HOL

Step 1: Creating the Ticket Booking React Application

Step 2: Opening the Ticket Booking Project in Visual Studio Code

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

Step 3: Creating the React Components for Conditional Rendering

Step 4: Implementing the Login Button Component

Step 5: Implementing the Logout Button Component

Step 6: Creating the Guest Greeting Component

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

Step 7: Creating the User Greeting Component

The screenshot shows the Visual Studio Code editor with the 'ticketbookingapp' project open. The Explorer panel on the left shows the file structure, with 'UserGreeting.js' selected under the 'src' directory. The main editor window displays the code for 'UserGreeting.js'.

```
src > JS UserGreeting.js
1 import React from 'react';
2
3 function UserGreeting() {
4   return (
5     <h1>Welcome back</h1>
6   );
7 }
8
9 export default UserGreeting;
```

The right sidebar shows the 'CHAT' panel with a 'SESSIONS' list containing 'UserGreeting.js'. A tip at the bottom right suggests using the 'Plan agent' to research and plan before implementing changes.

Step 8: Implementing the Greeting Component Using Conditional Rendering

The screenshot shows the Visual Studio Code editor with the 'ticketbookingapp' project open. The Explorer panel on the left shows the file structure, with 'Greeting.js' selected under the 'src' directory. The main editor window displays the code for 'Greeting.js'.

```
src > JS Greeting.js
1 import React from 'react';
2 import GuestGreeting from './GuestGreeting';
3 import UserGreeting from './UserGreeting';
4
5 function Greeting(props) {
6
7   const isLoggedIn = props.isLoggedIn;
8
9   if (isLoggedIn) {
10     return <UserGreeting />;
11   }
12
13   return <GuestGreeting />;
14 }
15
16 export default Greeting;
```

The right sidebar shows the 'CHAT' panel with a 'SESSIONS' list containing 'Greeting.js'. A tip at the bottom right suggests using the 'Plan agent' to research and plan before implementing changes.

Step 9: Integrating the Login and Logout Components in App.js

```
1 import React, { Component } from 'react';
2 import './App.css';
3
4 import Greeting from './Greeting';
5 import LoginButton from './LoginButton';
6 import LogoutButton from './LogoutButton';
7
8 class App extends Component {
9
10   constructor(props) {
11     super(props);
12
13     this.state = {
14       isLoggedIn: false
15     };
16   }
17
18   handleLoginClick = () => {
19     this.setState({
20       isLoggedIn: true
21     });
22   }
23
24   handleLogoutClick = () => {
25     this.setState({
26       isLoggedIn: false
27     });
28   }
29
30   render() {
31
32     const isLoggedIn = this.state.isLoggedIn;
33
34     let button;
```

```
35
36   if (isLoggedIn) {
37     button = (
38       <LogoutButton
39         onClick={this.handleLogoutClick}
40       />
41     );
42   }
43   else {
44     button = (
45       <LoginButton
46         onClick={this.handleLoginClick}
47       />
48     );
49   }
50
51   return (
52     <div style={{ marginLeft: "200px", marginTop: "80px" }}>
53       <Greeting isLoggedIn={isLoggedIn} />
54       {button}
55     </div>
56   );
57 }
58
59 export default App;
```
