

SLF4J Logging Exercises

Exercise 1: Logging Error Messages and Warning Levels

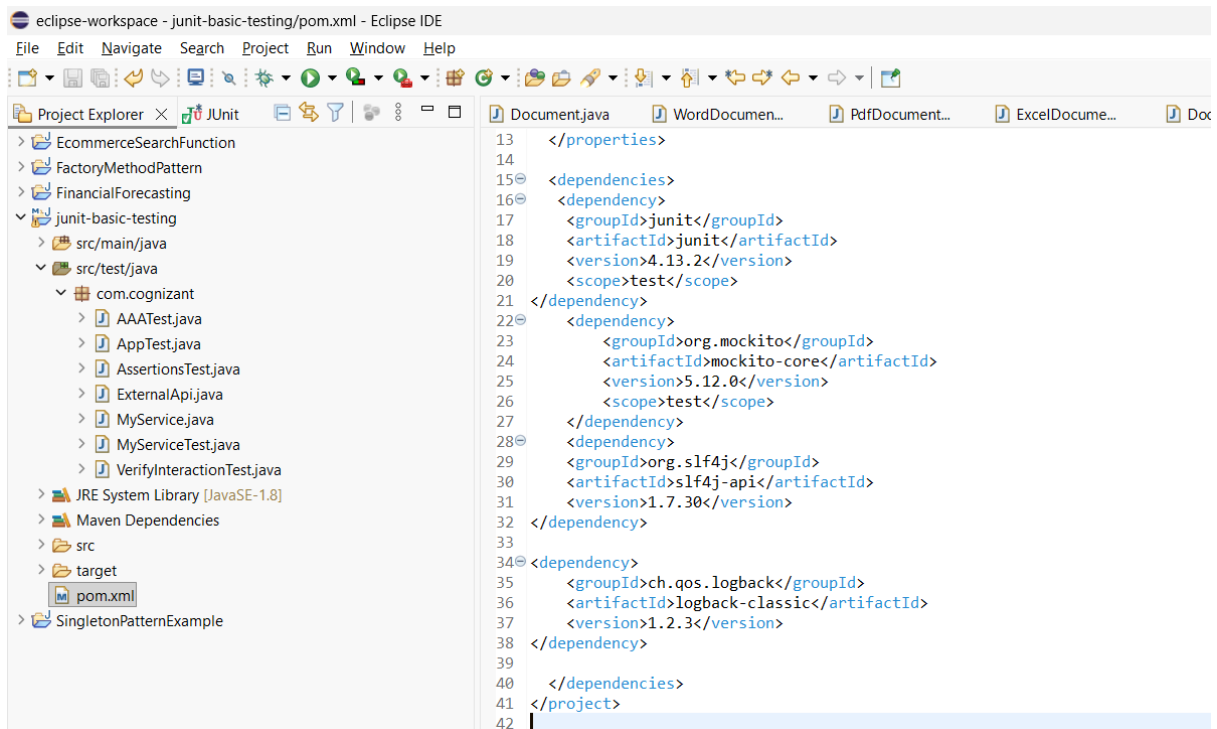

Step 1: Open the Existing Maven Project

Opened the existing **junit-basic-testing** Maven project in Eclipse IDE.

Step 2: Add SLF4J and Logback Dependencies

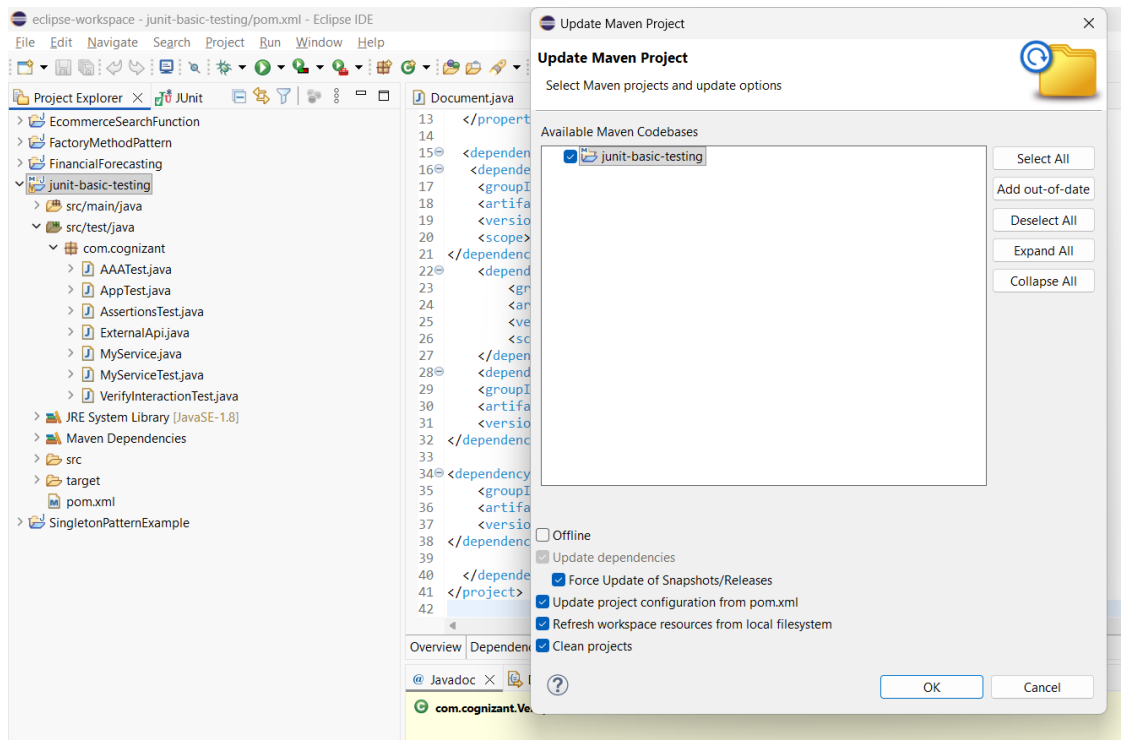

Added the required SLF4J and Logback dependencies in the pom.xml file.

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

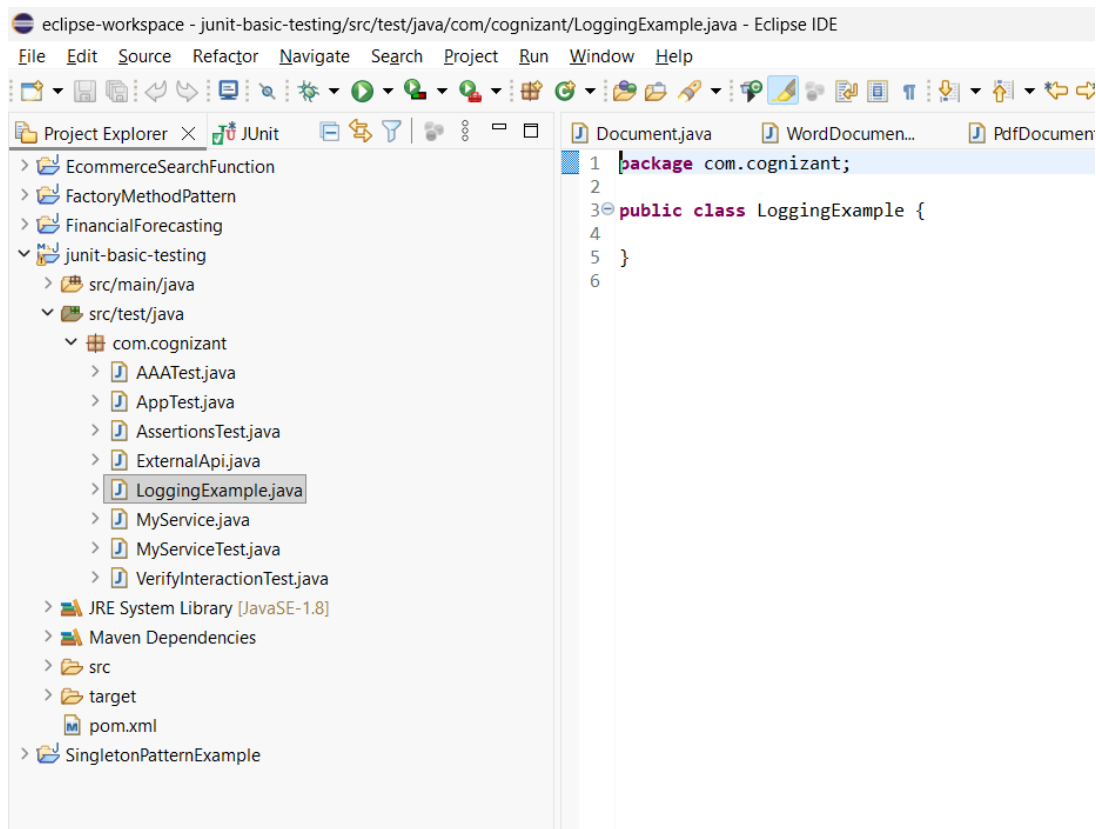

Step 3: Update Maven Project

Updated the Maven project to download and configure the newly added dependencies.

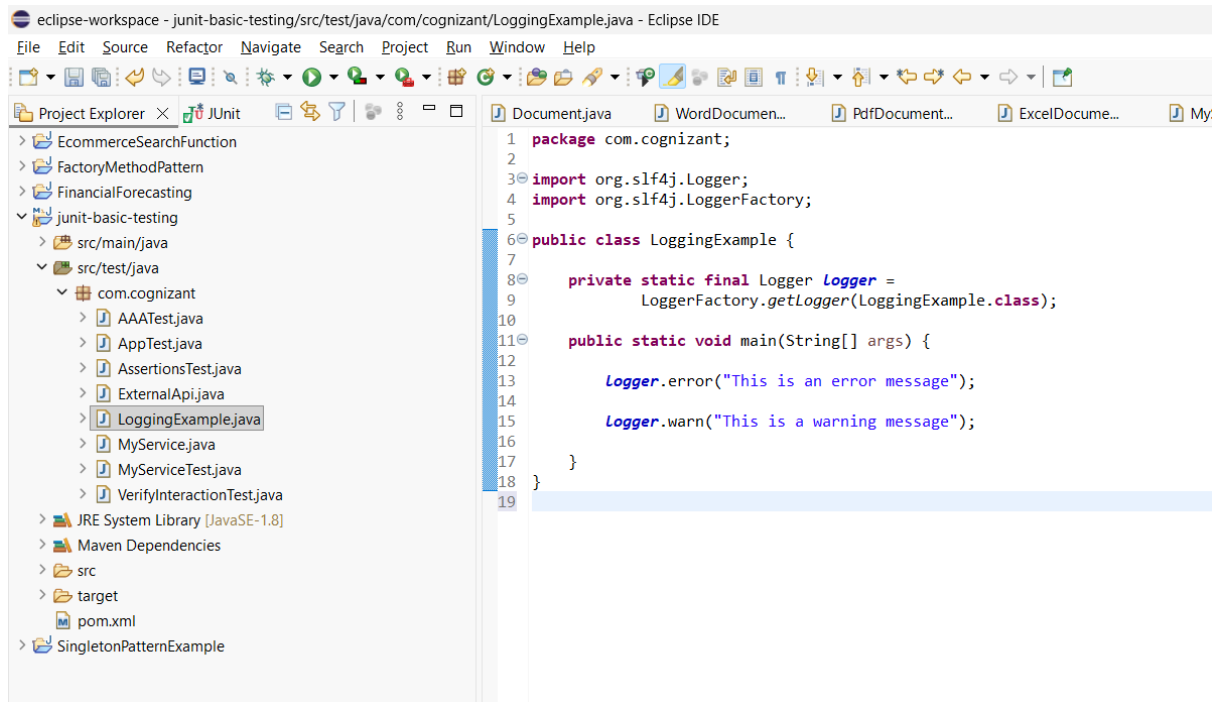

Step 4: Create a New Java Class

Created a new Java class named **LoggingExample** inside the com.cognizant package.

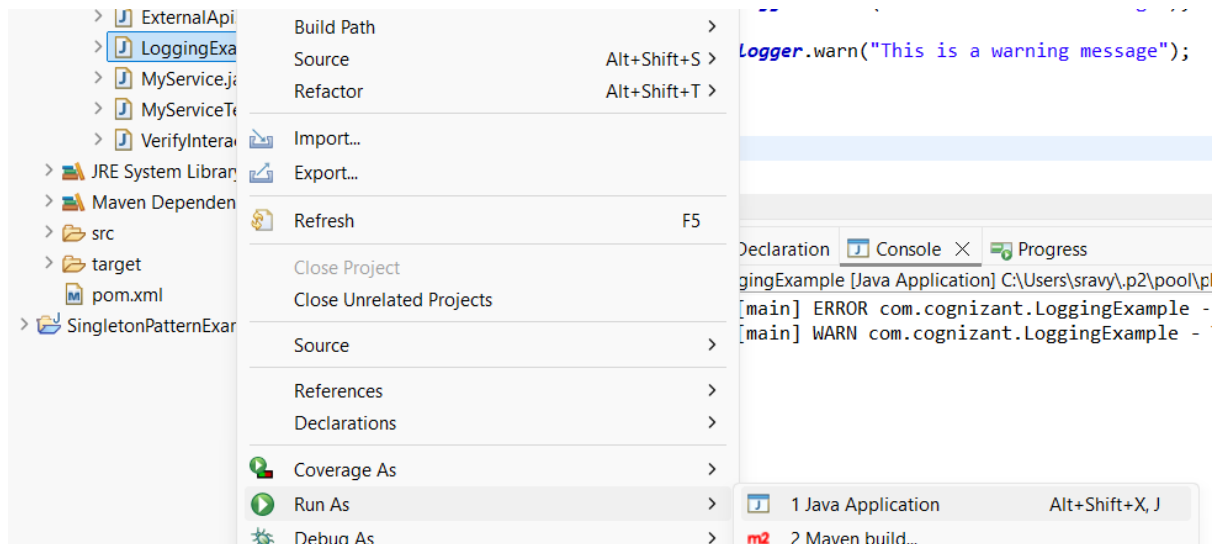

Step 5: Write the Java Code

Implemented the SLF4J logger to display error and warning messages.

Step 6: Run the Java Program

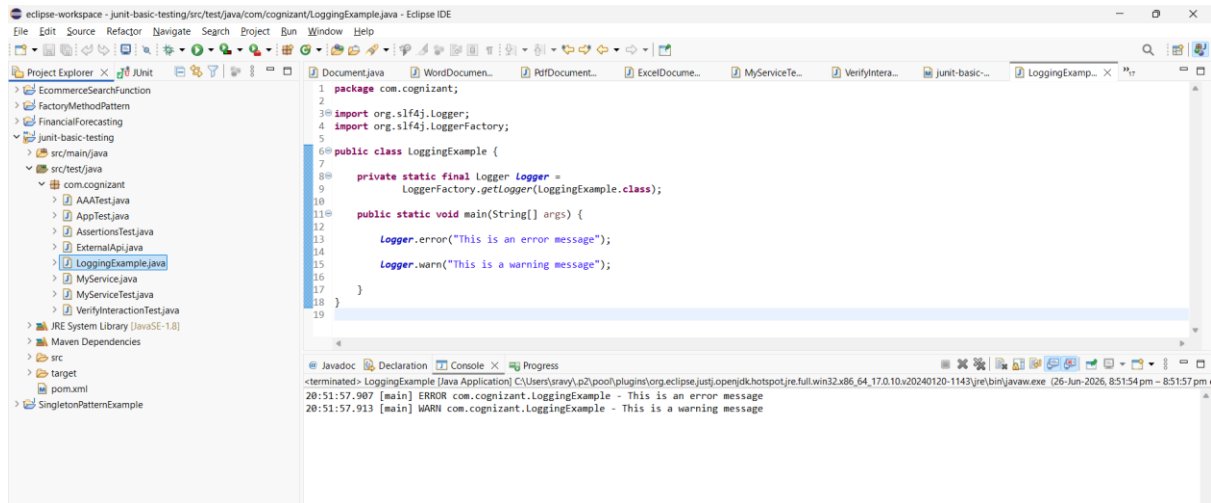

Executed the program as a Java Application.

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

Step 7: Console Output

Verified that the console displays both **ERROR** and **WARN** log messages successfully.

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays the project structure, with the 'LoggingExample.java' file selected under the 'src/test/java' directory. The main editor window shows the code for 'LoggingExample.java', which includes imports for 'org.slf4j.Logger' and 'org.slf4j.LoggerFactory', and a 'main' method that logs an error and a warning message. The Console window at the bottom shows the output of the application, displaying the error and warning messages as expected.

```
1 package com.cognizant;
2
3 import org.slf4j.Logger;
4 import org.slf4j.LoggerFactory;
5
6 public class LoggingExample {
7
8     private static final Logger logger =
9         LoggerFactory.getLogger(LoggingExample.class);
10
11     public static void main(String[] args) {
12
13         logger.error("This is an error message");
14
15         logger.warn("This is a warning message");
16
17     }
18 }
19
```

Console Output:

```
<terminated> LoggingExample [Java Application] C:\Users\sraay.p2\pools\plugins\org.eclipse.jdt.launcher\org.eclipse.jdt.launcher.exe (26-Jun-2026, 8:51:54 pm - 8:51:57 pm)
20:51:57.907 [main] ERROR com.cognizant.LoggingExample - This is an error message
20:51:57.913 [main] WARN com.cognizant.LoggingExample - This is a warning message
```

Conclusion

Successfully configured **SLF4J** and **Logback** in the Maven project. The application logged both **error** and **warning** messages correctly, demonstrating basic logging functionality using the SLF4J framework.
