

Spring Core_Maven

Exercise 4: Creating and Configuring a Maven Project

Scenario:

You need to set up a new Maven project for the library management application and add Spring dependencies.

Steps:

1. **Create a New Maven Project:**
 - Create a new Maven project named **LibraryManagement**.
2. **Add Spring Dependencies in pom.xml:**
 - Include dependencies for Spring Context, Spring AOP, and Spring WebMVC.
3. **Configure Maven Plugins:**
 - Configure the Maven Compiler Plugin for Java version 1.8 in the pom.xml file.

Step 1: Use the Existing Maven Project

Step 2: Add Spring Dependencies in pom.xml

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

Step 3: Configure the Maven Compiler Plugin

COGNIZANT DIGITAL NURTURE 5.0 – JAVA FSE

Step 4: Run the Application

Output

Result

The existing LibraryManagement Maven project was successfully configured by adding the required Spring dependencies and configuring the Maven Compiler Plugin for Java 1.8. The application executed successfully and produced the expected output.
